The power of email comes through again...just so you know, my response wasn't meant to be sarcastic, angry or any other emotion. I was simply making a statement addressing your response.

We appreciate it.

Great, thanks. Just looked back at my email. Just so we are clear, the "if there are any was directed at the cons." It makes sense, but since it is over 250 dollars the expense is going to be questioned. Having that said, I want to have something (like what you put together below) ready to go. Go ahead and put it on my credit card. I would prefer you use mine so it is clear that I have made the purchase not you. When the questions come, I want them to come to me. If this doesn't make sense then just give me a call.

Thanks again,

Anna

Trust me, I wouldn't be bothering you with this if I didn't think it had a legitimate purpose. Unlike other units, the Tactical Team requests things we will actually use. I was VERY impressed.

Pros:

1. Safety of Team members [REDACTED]
2. [REDACTED]
3. Cheap – it gets broken or damaged, Risk Management buys us another one or fixes it.
4. Digital cameras are crystal clear and allow the viewer to see ahead and/or below the device.
5. App downloaded [REDACTED] which means we have more than one platform to operate from.
6. [REDACTED]
7. 100 meters of capability – [REDACTED]
8. Ability to record while flying and take still photos, which get downloaded to the attached thumb drive – great reconnaissance tool.
9. Accessories or replacement parts are fairly cheap.

Cons:

1. 15 minute of fly time; however, purchase a 2nd battery and that increases to ½ hour and batteries take an hour to recharge.
2. Wind effects the device – heavy wind may prohibit it from being flown.
3. It's a "toy", which probably wasn't made to be used for Tactical missions (to that I say, "why not?")
4. [REDACTED]

How Impressed were you with the product? Give me a solid list of pros and then cons if there are any.

I think it's going to be a no go...I was using the \$250 price, which is what I got from Eric Parker. I just looked on line, which I should have done earlier, and they are \$299 each + \$40 for a spare battery.

Thoughts?

You can have Melissa use my credit card and if it is a little over that is fine. Do you know if yours will let you put that much on it at a time?

Okay...are you alright if I use my credit card?

Also, it might be over that amount as I don't know what shipping will be.

No, I tried to respond but my blackberry went dead yesterday at the planning conference. If we can keep the expense under 250 on my credit card then I say let's go for it. I am not going to push this request up so let's try not to be vocal about it. Let's use it and prove it makes sense and then I will sell it after that. It makes sense to me but money is starting to get tight.

Nick,

Do we have something that can operate/run it? Or is this another purchase that we need to make?

Lt. Love,

I am respectfully requesting your approval to purchase the remote controlled helicopter, which can be viewed on the website below.

Some interesting features:

1. 15 minutes of flying time.
2. Controlled through a cell phone or other tablet (i.e. I-Pad)
3. Has digital camera forward and below.
4. Has bumpers so when flying indoors, it doesn't disrupt the flight.
5. I evaluated it today and am very impressed.
6. It's only \$250 and spare batteries are \$35 each.
7. It could end certain incidents early. [REDACTED]

8. [REDACTED]

9. It has 150 meter range.

10. I flew it today at the MCJA from inside the building and it's range was impressive and the camera footage was excellent.

Thanks for any consideration.

Nick
